

## Patch no Curtin

### Change A — uefi\_find\_grub\_device\_ids():

```
parent_disk_id = sconfig[primary_esp].get('device')
if parent_disk_id and sconfig.get(parent_disk_id, {}).get('grub_device') is False:
    LOG.debug('grub_device=false on parent disk, skipping GRUB install')
    return []
```

### Change B — setup\_grub():

```
if uefi_bootable and len(storage_grub_devices) == 0:
    grubcfg['install_devices'] = None
```

### Change C — Fallback:

```
elif instdevs is None:
    LOG.debug("grub skipped by config, preserving None")
```

### Change D — Guarda install\_grub():

```
if instdevs is not None:
    install_grub(instdevs, target, uefi=uefi_bootable, grubcfg=grubcfg)
```
